

## ECOMED Project

On March 8<sup>th</sup> and 9<sup>th</sup> it was held the third monitoring meeting of the ECOMED European project at the University of Évora (Portugal) in which Naturalea participates. As part of the European Union program Horizon 2020 this project is focused on improving aspects of training, design, execution and monitoring of soil and water bioengineering in the Mediterranean area.

On this meeting three main topics were discussed:

- The organization of an international course for the training of technicians in soil and water bioengineering
- The preparation of tracking key works throughout Europe to establish protocols for future follow-ups for this type of works
- The creation of a botanical database in relation to the suitability of the species for soil and water bioengineering.

More information about the project is available on the web site [www.ecomedbio.eu](http://www.ecomedbio.eu) and on Facebook and Twitter Ecomedbio.

In the framework of this project, on the 9<sup>th</sup> of March took place the international workshop “Formation in Soil and Water Bioengineering” organized by the European Federation of Soil Bioengineering –EFIB-. The seminar gathered experts in the field of Bioengineering with professionals from other related disciplines to discuss the promotion of a specific training in the internationally recognized sector as well as its interrelation with other disciplines.
